

"For a fraction of the cost, I have four refurbished wheels which look like new. I can't recommend Wheelmasters enough."
Trevor Chidwell

Crane and Earthmover wheel refurbishment

We offer a crane and earthmover wheel repair service which could **save you hundreds** of pounds as opposed to buying a new wheel!

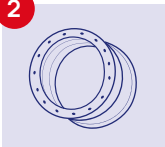

» OUR 5-STEP WHEEL REFURBISHMENT PROCESS

1

Inspect wheel for damage

2

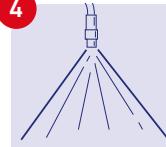

Remove worn centre/front end

3

Fit new centre/front end to required specification

4

Shot blast rim back to bare metal

5

Finish wheel in primer, or powder coat paint

Our services

Along with repair and refurbishment, we also offer the following specialised services:

- Rim modification for different tyres and track widths
- Rim widening for floatation tyres
- Reinforcement for unique applications
- Shot blasting and powder coating
- Replacement components

Our results

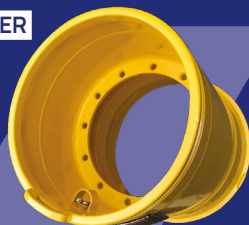

The pictures show an example of a 25" wheel removed from a Bell B40C Dump Truck. The wheel nuts had loosened resulting in elongated stud holes and a worn centre bore.

The wheel was inspected, re-naved, shot blasted and powder coated, returning the wheel to an almost new condition within a few days.
